PROFESSIONAL SUMMARY

Fresh graduate in Data Science and Artificial Intelligence from Yarmouk University with a solid academic and applied foundation in data analytics — including SQL, Power BI, and Python (Pandas). Comfortable across the core data workflow: extracting and cleaning data, running exploratory analysis, and presenting findings through clear dashboards and business insights. Built hands-on exposure to applied AI, including Retrieval-Augmented Generation (RAG) and LLM-based systems, through a graduation project. Looking to start a career as a Data Analyst, with a strong interest in growing further into AI-supported analytics roles.

SKILLS

- **Data Analytics & BI:** SQL (MySQL, SQLite), Power BI, Tableau, Excel (PivotTables, KPI dashboards), Python (Pandas, NumPy), data cleaning, data aggregation, exploratory data analysis, Git.
- **Applied AI (via graduation project):** Retrieval-Augmented Generation (RAG), vector databases (ChromaDB), text embeddings, BM25 retrieval, prompt engineering, LLM API integration, workflow orchestration (LangGraph), OCR (Tesseract), FastAPI, PostgreSQL.
- **Machine Learning Foundations:** Scikit-learn, classification, regression, and model evaluation metrics — built through NVIDIA Deep Learning coursework.

PROJECTS

Bayyan AI — RAG-Based Tax Advisory Chatbot (Graduation Project)

Feb 2026 – Jun 2026

- Built a prototype conversational AI system that answers tax-related queries by retrieving information from local Arabic financial documents, using FastAPI for the backend and PostgreSQL for storage.
- Applied a hybrid Retrieval-Augmented Generation (RAG) pipeline — combining BM25 keyword retrieval with multilingual sentence embeddings in ChromaDB — to improve the relevance of retrieved answers.
- Used an LLM (via API) with LangGraph to orchestrate a multi-turn conversation workflow with stateful chat memory, including a basic intent-classification step to route user queries.
- Implemented a document-processing step with Tesseract OCR to extract text from scanned Arabic financial documents for use in the retrieval pipeline.
- Result: a working prototype that shows how an LLM can be grounded in private, domain-specific data to produce more relevant answers, while keeping the actual tax calculations rule-based for accuracy — a hands-on introduction to applied RAG system design.

E-Commerce Delivery Impact Analysis — Olist Dataset (Personal Project)

Aug 2026

- Analyzed 96,353 completed orders using SQL (SQLite) to investigate how delivery delays affect customer satisfaction, joining orders, reviews, and customer tables and calculating delivery timing with date-diff and conditional logic (JULIANDAY, CASE WHEN).
- Cleaned and aggregated the resulting data in Python (Pandas: groupby, agg), finding a 7.99% delay rate and a 40% drop in average review score (4.29 → 2.57) for delayed vs. on-time shipments.
- Built a single-page Power BI dashboard to present delivery KPIs and On-Time vs. Delayed review comparisons, turning the analysis into a clear, business-readable insight on logistics reliability and customer-churn risk.

EXPERIENCE

Inventory Controller (One-Month Training) — Pella Pharma (Pharmaceutical Manufacturing)

Jul 2026 – Aug 2026

Al-Hassan Industrial City, Irbid, Jordan

- Completed a one-month, hands-on training focused on inventory tracking and stock organization within a regulated pharmaceutical manufacturing environment.
- Assisted the team with basic stock reconciliation and supply tracking under supervision, following standard operating procedures.
- Gained early, practical exposure to working within a structured, team-based operational setting.

Software Engineering & Problem-Solving Trainee — 42 Irbid, Crown Prince Foundation

Sep 2025 – Oct 2025

- Practiced programming logic, debugging, and root-cause analysis through daily peer-to-peer, project-based learning.
- Developed independent problem-solving skills and adaptability while working under changing technical requirements.

EDUCATION

Bachelor of Science in Data Science and Artificial Intelligence — Yarmouk University

Sep 2022 – Sep 2026

Irbid, Jordan — Fresh Graduate — Very Good

CERTIFICATIONS

- Data Analytics Essentials — Cisco Networking Academy (Aug 2026)
- Fundamentals of Deep Learning — NVIDIA (Dec 2024) | Generative AI: Prompt Engineering — IBM Developer Skills Network (Jan 2026)
- Gemini Certified Student (University Tier), Google AI Competencies — Google for Education (Jun 2026, valid through Jun 2029)
- Boost Your Career with AI — Kiron Open Higher Education (Mar 2026) | Drive Your Success with Human Skills — Kiron Open Higher Education (May 2026)

LANGUAGES

Arabic: Native | English: Professional Working Proficiency
